

## 1. The host computer selects CAN communication

Operation steps: Select: Set "communication equipment" CAN communication

Operation steps: Select the corresponding baud rate

1. Select the corresponding CAN configuration file: for common Zhou Ligong and Chuangxin, put the configuration file in the folder according to the communication box used by the customer, and delete the redundant configuration file. For example, delete the Chuangxin configuration file in the folder when using Zhou Ligong communication box
