

STUDY OF BETA GLOBIN VARIANTS

**THESIS SUBMITTED FOR THE DEGREE OF
DOCTOR OF PHILOSOPHY (SCIENCE)
OF THE
UNIVERSITY OF CALCUTTA
1999**

SWAPAN KUMAR DAS
DEPARTMENT OF PATHOLOGY
VIVEKANANDA INSTITUTE OF MEDICAL SCIENCES
99 SARAT BOSE ROAD, CALCUTTA-700 026

CONTENTS

		PAGE NO.
1.0	INTRODUCTION	1-3
2.0	REVIEW OF LITERATURE	4-65
2.1	Haemoglobin molecule in man	4
2.1.1	Structure and chemistry	4
2.1.2	Haemoglobin function	5
2.1.3	Mechanisms of Haemoglobin Synthesis	7
2.1.4	Globin moieties of human haemoglobins	9
2.2	Study of human beta like globin gene	11
2.2.1	β -gene and δ -gene	15
2.2.2	$A\gamma$ -gene and $G\gamma$ -gene	16
2.2.3	ϵ -gene	17
2.2.4	$\psi\beta_1$ -gene	17
2.3	Variations of beta globin gene associated with human disease	18
2.3.1	Structural variants	18
2.3.1.1	Sickle cell disease	18
2.3.1.2	Haemoglobin C	20
2.3.1.3	Haemoglobin D Punjab	22
2.3.1.4	Haemoglobin E	23
2.3.2	Molecular basis of structural haemoglobin variants	24
2.3.3	Thalassaemia syndromes	27
2.3.3.1	Distribution	27
2.3.3.2	β -thalassaemia mutations and their distribution	28
2.3.4	Uncommon beta globin variants	31

		PAGE NO.
2.3.5	Compound disorders of haemoglobin related to β -globin	31
2.3.5.1	Hb SD disease	35
2.3.5.2	Hb SE disease	35
2.3.5.3	Hb DE disease	35
2.3.5.4	Hb SC disease	35
2.3.5.5	S β -thalassaemia	35
2.3.5.6	D β -thalassaemia	35
2.3.5.7	E β -thalassaemia	35
2.3.5.8	$\delta\beta$ -thalassaemia and hereditary persistence of fetal haemoglobin	36
2.3.6	Somatic mutation causing thalassaemia	36
2.3.7	β -thalassaemia unlinked to β -globin	36
2.3.8	Pathogenesis of disease	37
2.3.8.1	Anaemia	37
2.3.8.2	Growth retardation	39
2.3.8.3	Skeletal changes	40
2.3.8.4	Vascular changes	41
2.3.8.5	Other complications	41
2.3.9	Molecular studies of haemoglobinopathy patients and correlation with phenotypic alterations	41
2.4	Developmental stage specific expression of β -globin gene cluster	44
2.4.1	Trans acting factors	44
2.4.1.1	GATA-1 and 2	44
2.4.1.2	NF-E2	44
2.4.1.3	EKLF	45
2.4.1.4	SSP	45
2.4.1.5	YY1	45
2.4.2	Cis acting elements	46

	PAGE NO.
2.4.2.1 Local cis acting elements	46
2.4.2.2 Distal cis acting elements	47
2.4.3 Interaction between the β LCR, β like globin and other cis and trans acting factors	48
2.4.3.1 Methylation status and chromatin structure influence gene expression	48
2.4.3.2 Silencing	49
2.4.3.3 Competition and interaction with LCR	49
2.4.4 HPFH and $\delta\beta$ -thalassaemia : A loss of developmental gene switching	51
2.5 Origin and spread of β -globin mutations	53
2.5.1 Origin	53
2.5.2 DNA polymorphisms in the β -globin gene cluster and association of haplotypes with β -globin gene mutations	55
2.5.3 Multiple origin vs single origin of mutation	59
2.5.4 Spread of haemoglobinopathy mutations in India	60
2.5.4.1 Bio social reasons	60
2.5.4.2 Malaria hypothesis	61
3.0 MATERIALS AND METHODS	66-107
3.1 List of chemicals used	66
3.2 List of instruments used	69
3.3 Study of genetic variation and polymorphism of human haemoglobin and β -globin gene	71
3.3.1 Study of haemoglobin variants among patients of β -thalassaemia and other haemoglobinopathies	71
3.3.1.1 Materials	71

		PAGE NO.
3.3.1.2	Methods	71
3.3.1.2.1	Estimation of haemoglobin	71
3.3.1.2.2	Characterization of haemoglobin variants	75
3.3.1.2.3	Quantitative estimation of slow moving haemoglobin variants	77
3.3.1.2.4	Quantitative estimation of HbF	78
3.3.1.2.5	Sickling Test	80
3.3.2	Study of β -globin gene mutations	81
3.3.2.1	Materials	81
3.3.2.2	Methods	81
3.3.2.2.1	Isolation of DNA from blood sample	81
3.3.2.2.2	Yield gel for assessing the quality of DNA isolated from blood	84
3.3.2.2.3	Checking the concentration and quality of DNA	85
3.3.2.2.4	PCR-ARMS technique for detection of β -thalassaemia and other haemoglobinopathy mutation at β -globin gene	86
3.3.2.2.5	Statistical Analysis	91
3.3.3	Study of β^E globin gene haplotype by RFLP-PCR technique	94
3.3.3.1	Materials	94
3.3.3.2	Methods	95
3.3.3.2.1	Haematological and biochemical indices	95
3.3.3.2.2	DNA preparation	95
3.3.3.2.3	PCR based ARMS analysis	95
3.3.3.2.4	Restriction enzyme digestion of PCR products	95
3.3.3.2.5	Haplotype construction	100
3.3.3.2.6	Statistical analysis	100

	PAGE NO.
3.3.4 Haplotype analysis of E β -thalassaemia patients	101
3.3.4.1 Materials	101
3.3.4.2 Methods	101
3.3.4.2.1 Haematological and biochemical indices	101
3.3.4.2.2 DNA preparation	101
3.3.4.2.3 PCR based ARMS analysis	101
3.3.4.2.4 Restriction enzyme digestion of PCR products	102
3.3.4.2.5 Haplotype construction	102
3.3.5 Molecular study of hereditary persistence of fetal haemoglobin	102
3.3.5.1 Materials	102
3.3.5.2 Methods	102
3.3.5.2.1 Haematological parameters	102
3.3.5.2.2 DNA analysis	102
3.4 Alterations in haemoglobin molecule during development of mouse (<i>Mus musculus</i> L.)	103
3.4.1 Test system	103
3.4.2 Maintenance of animals	103
3.4.3 Breeding	104
3.4.4 Methods	104
3.4.4.1 Collection of blood from adult mice	104
3.4.4.2 Collection of blood from mice embryo	104
3.4.4.3 Preparation of haemolysate	105
3.4.4.4. Agarose gel electrophoresis at alkaline pH	106

4.0	OBSERVATION AND INFERENCE	 108-143
4.1	Study of Genetic variation and polymorphism of human haemoglobin and β -globin gene	 108
4.1.1	Study of haemoglobin variants among patients of β -thalassaemia and other haemoglobinopathies <u>PLATE-I to IV</u>	 108
4.1.2	Study of β -globin gene mutations <u>PLATE-V to IX</u>	 119
4.1.3	Study of β^E -globin gene haplotype by RFLP-PCR technique <u>PLATE-X to XI</u>	 131
4.1.4	Haplotype analysis of $E\beta$ -thalassaemia patients <u>PLATE-XII to XVI</u>	 136
4.1.5	Molecular study of hereditary persistence of fetal haemoglobin <u>PLATE-XVII to XXI</u>	 139
4.2	Alterations in haemoglobin molecule during development of Mouse (<i>Mus musculus</i> L.) <u>PLATE-XXII to XXVI</u>	 142
5.0	DISCUSSION	 144-159
5.1	Geographical distribution	 145
5.2	Age and Sex distribution	 148
5.3	Haematological parameters	 148
5.4	β -thalassaemia and other haemoglobinopathy mutations	 150
5.5	Geographical distribution of β -thalassaemia and other haemoglobinopathy mutations	 153
5.6	Genotype and phenotype correlation	 154
