The details of which are as follows:

Topic: DONATE BLOOD SAVE LIFE.

Link was open till 2:00PM.

E-Certificates of excellence will be provided to the top 5 participants.

NSS Cell, SSIPMT Raipur wishes you all a safe lockdown & awaits for your highly esteemed contribution by participating in this E- POSTERS DESIGNING ONLINE COMPETITION

WHY YOU SHOULD CONSIDER BEING A BLOOD DONOR				
Why do we need to pay so much attention to blood donation? 1. Every two seconds, a person in India requires blood 2. India needs four crore units of blood every year but only 40 lakh units are available				
MYTHS	People who weigh heavier are eligible for donating blood, those who weigh lighter aren't	A blood donor is prone to infection	If you smoke, you cannot be a blood donor	Donating blood makes the immune system weak
As long as you weigh above 50 kgs, donating blood has nothing more to do with your weight	A fresh needle is used for each blood donor. So, there is no chance of an infection	you should avoid smoking for three hours after donating blood	There is no such lasting danger to the immune system when you donate blood.	TRUTH
BENEFITS	Blood donation is beneficial in reducing the risk of heart and liver ailments caused by the iron overload in the body.	Regular blood donation reduces the weight of the donors.	Blood donation is beneficial in reducing the risk of heart and liver ailments caused by the iron overload in the body.	Health benefits of blood donation include reduced risk of hemochromatosis.
 Safe blood saves lives and improves health. It is the most precious gift that anyone can give to another person: the gift of life
