

Supervising Performance- Through the use of AI, teachers can use this data to create specific reports that assist them to recognize the progress being made by different students

Providing Important Feedback to Students-Usually, the students have growing insecurity about asking questions or clearing the course's concepts with their teachers in front of their fellow classmates. The students are also worried about getting critical advice for their performance on a public forum. But through the use of AI, students would feel more at ease when it comes to making mistakes that are essential for them in order to learn well. Moreover, through the use of Artificial Intelligence, students would also obtain the necessary suggestions that they require in order to improve.

Education Would Become a Fun Experience-Now, Artificial Intelligence can truly make education a lot more flexible and perceptive. In fact, it can be used in order to persuade students to develop knowledge themselves. So Artificial Intelligence improves the learning experience in this modern era where this is a short attention span.

Global Interaction with Peers- If students are incapable to be present at a class due to some reason, all they would require is to visit a link, click on the link, and the student can connect with the live classroom virtually.

Responsibility for Teachers

The teachers would always play a significant role even in the Artificial Intelligence era and beyond. It would become a necessary function for the teachers to use AI, delivering the practices of AI-based technology according to the requirements of their students. The teachers would be responsible to use Artificial Intelligence more to supplement the most excellent ways of learning and teaching that already exist.

The use of Artificial Intelligence will certainly reduce the hectic work and physical requirements of providing education to the students. Now with the use of Artificial Intelligence, teachers can outsource their targets easily and achieve results set for each and individual performance of a student. So, teachers, through the use of Artificial Intelligence, would have a significant part in delivering and improving the learning experience for the students.
