# Preface

This book portrays a fictional depiction of our own universe and how it came into existence billions of years ago. The book attempts to visualize what must have transpired billions and billions of years ago in the skies and how did the various spatial entities, including us, the earthlings, come into being from nowhere. You will catch subtle references to many celestial bodies of the cosmic realm as you progress through this book. Most of their names used in the book have been tweaked for creative representation.

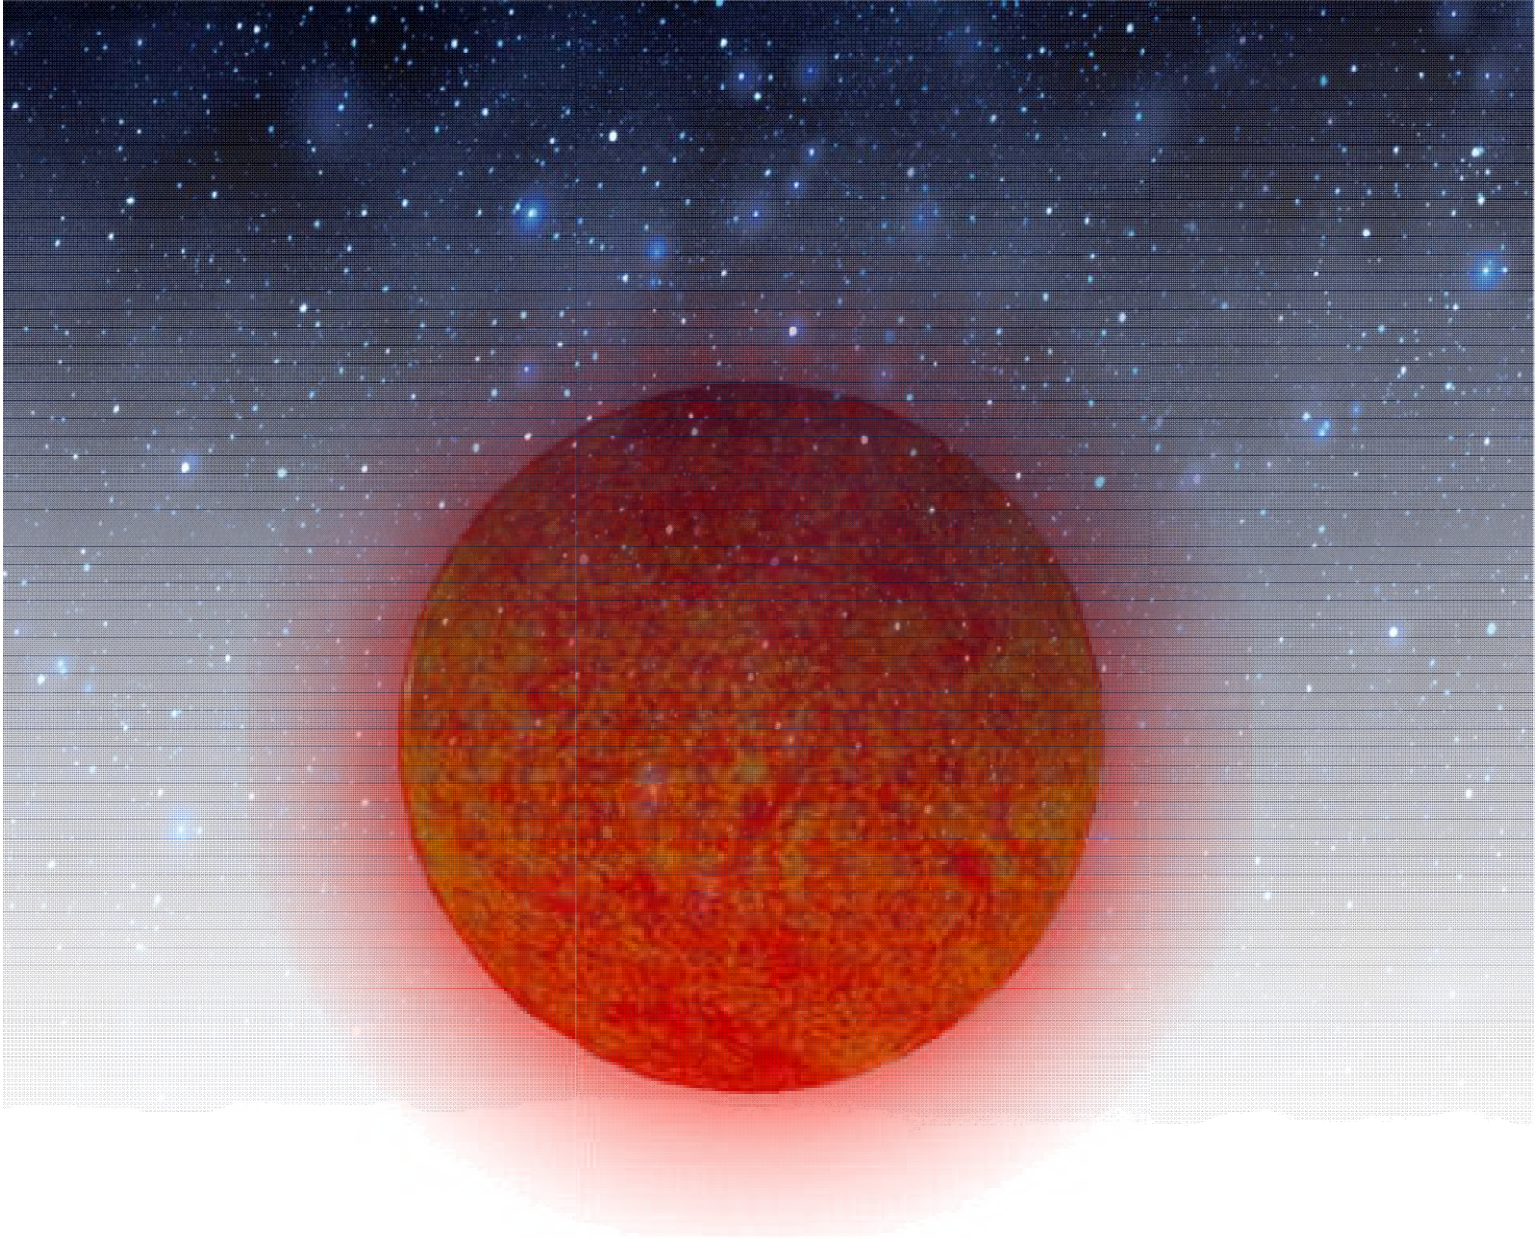

Whilst the book is set in the past, and rewinds to many light years ago, it also leaps forward and time travels into an imaginary future of what will the skies behold, billions of years from now.

The book particularly casts a spotlight on the existence of *dark* and its various states. Dark revelations come to light as it engineers its existence across many forms. A menacing truth surfaces, that is subtle, yet very intimidating. Can the light break its tenacity and continuum and reign as an all-pervading energy? Only *time* will tell.

# Acknowledgement

Thank you, Antares, this book wouldn't have seen the light of day, had it not been for you.

A lot of basic researched references have been taken from Google to build upon this imaginative story. Thank you for being there Google, as always!
