<b>Investment Strategy</b>	<p>The Investment Strategy aims to generate returns through active management of mid and small-cap equities (with at least 65% of the portfolio in companies outside the top 100 by market capitalization). Investment Strategy will look to minimize drawdowns during weak market phases and falls by tactically hedging its equity positions using offsetting derivatives, naked shorts in stocks that appear more vulnerable and shorter in permissible indices. It's an active strategy.</p>
<b>Risk Profile of the Scheme</b>	<p><b>Risks associated with investing in Equities and equity related instruments:</b></p> <ol style="list-style-type: none"> <li>Investments in the equity shares of the Companies are subject to price fluctuation on daily basis. The volatility in the value of equity is due to various micro and macro economic factors like economic and political developments, changes in interest rates, etc. affecting the securities markets. This may have adverse impact on individual securities/sector and consequently on the NAV of Investment Strategy.</li> <li>The NAVs of Investment Strategies investing in equity will fluctuate as the daily prices of the individual securities in which they invest fluctuate and the units when redeemed may be worth more or less than their original cost.</li> <li>The value of the Investment Strategy's investments, may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or policies of any appropriate authority and other political</li> </ol>

and economic developments and closure of stock exchanges which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the units of the Investment Strategy may fluctuate and can go up or down.

- d. Investors may note that Fund Manager's investment decisions may not always be profitable, as actual market movements may be at variance with anticipated trends.
- e. The sector weightage in the Investment Strategy would be different from that in the Index. Because of this the Investment Strategy returns could be divergent from the Index returns and could also under-perform if the sector calls do not go right as expected by the fund management team.

**Risk associated with Investing in Debt and money market instruments :** The performance of the Investment Strategy may be affected by changes in macroeconomic factors such as Government policies, general levels of interest rates and risks associated with trading volumes, liquidity and settlement systems.

**Interest Rate/Price risk:** This risk is associated with movements in interest rate, which depend on various factors such as government borrowing, inflation, economic performance etc. The values of investments will appreciate/depreciate if the interest rates fall/rise. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices generally increase. The extent of fall or rise in the prices depends upon factors such as coupon, residual maturity of the security, micro and macroeconomic scenario as well as the yield level at which the security is being traded.

**Credit Risk/Default risk:** Credit risk is the risk that the issuer of a debenture/ bond or a money market instrument may default on interest &/or principal payment obligations. This risk arises due to any uncertainty in counterparty's ability or willingness to meet its contractual obligations. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. Corporate bonds carry a higher credit risk than Government Securities. Within corporate bonds as well, there are different levels of safety. Credit risks of most issuers of debt securities are rated by independent and professionally run rating agencies. Ratings of Credit issued by these agencies typically range from "AAA" (read as "Triple A" denoting "Highest Safety") to "D" (denoting "Default"), with about 6 distinct ratings between the two extremes. A bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency. The highest credit rating (i.e. lowest credit risk) commands a lower yield for the borrower. Conversely, a lower rated credit borrower would raise funds at a relatively higher cost. On account of a higher credit risk for lower rated borrowers, lenders prefer higher rated instruments further justifying the lower yields.

**Re-investment Risk:** Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.

**Spread Risk:** In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

**Counterparty Risk:** This is the risk of failure of counterparty to the transaction to deliver securities against consideration received or to pay consideration against securities delivered, in full or in part or as per the agreed specification. There could be losses to the Investment Strategy in case of counterparty default.

**Inflation risk:** Inflation, in most basic terms, erodes the purchasing power of money and also withers the value of existing investments; in other words, it reduces the purchasing power of a bond investor's future interest payments and principal, collectively known as "cash flows." Inflation also leads to higher interest rates, which in turn leads to lower bond prices.

**Liquidity risk:** The liquidity of a bond may change depending on market conditions leading to changes in the liquidity premium linked to the price of the bond. At the time of selling the security, the security can become illiquid leading to loss in the value of the portfolio. There could therefore be difficulties in exiting from corporate bonds in times of uncertainties. Liquidity in a Investment Strategy therefore may suffer.

**Liquidity Risk on account of unlisted securities:** The liquidity and valuation of the Investment Strategy investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment. The unlisted security can go down in value before the divestment date and selling of these securities before the divestment date can lead to losses in the portfolio.

**Settlement Risk:** Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.

**Legislative Risk:** Changes in government policy in general and changes in tax benefits applicable to Mutual Funds may impact the returns to investors in the Investment Strategies.

**Risk of Rating Migration:** It may be noted that the price of a rated security would be impacted with the change in rating and hence, there is risk associated with such migration.

**Risks associated with Investing/trading in Derivatives:** Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of the fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions

	<p>entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the “counterparty”) to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mis-pricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices, illiquidity risk whereby the Investment Strategy may not be able to sell or purchase derivative quickly enough at a fair price. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.</p> <p><b>Risk factors associated with InvITs:</b></p> <ul style="list-style-type: none"> <li>▪ Price Risk: Securities/Instruments of InvITs are volatile and prone to price fluctuations on a daily basis owing to market movements. The extent of fall or rise in the prices is a fluctuation in general market conditions, factors and forces affecting capital market, Real Estate and Infrastructure sectors, level of interest rates, trading volumes, settlement periods and transfer procedures.</li> <li>▪ Interest Rate Risk: Securities/Instruments of InvITs run interest rate risk. Generally, when interest rates rise, prices of units fall and when interest rates drop, such prices increase.</li> <li>▪ Credit Risk: Credit risk means that the issuer of a InvIT security/ instrument may default on interest payment or even on paying back the principal amount on maturity. Securities/ Instruments of InvITs are likely to have volatile cash flows as the repayment dates would not necessarily be pre scheduled.</li> <li>▪ Liquidity Risk: This refers to the ease with which securities/instruments of InvITs can be sold. There is no assurance that an active secondary market will develop or be maintained. Hence there would be time when trading in the units could be infrequent. The subsequent valuation of illiquid units may reflect a discount from the market price of comparable securities/instruments for which a liquid market exists. As these products are new to the market they are likely to be exposed to liquidity risk.</li> <li>▪ Reinvestment Risk: Investments in securities/instruments of InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or Dividend pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns.</li> <li>▪ Legal and Regulatory Risk: The regulatory framework governing investments in securities/instruments of InvITs comprises a relatively new set of regulations and is therefore untested, interpretation and enforcement by regulators and courts involves uncertainties. Presently, it is difficult to forecast as to how any new laws, regulations or standards or future amendments will affect the issuers of InvITs and the sector as a whole. Furthermore, no assurance can be given that the regulatory system will not change in a way that will impair the ability of the Issuers to comply with the regulations, conduct the business, compete effectively or make distributions.</li> </ul> <p>For details on risk factors and risk mitigation measures, please refer ISID.</p>
